

nervefunction

Many things can impair your nervous system and interfere with its function.

When there is no interference, your nervous system controls the healthy function of virtually every cell, tissue, organ, and system of your body.

The effects of nervous system dysfunction can be caused by several areas of the spine.

Do you know anyone experiencing:

Plexuses and Ganglion serve as "junction boxes" to collect and distribute nerve impulses from the central nervous system.

* The cranial nerves are part of the brain stem, which extends down into the cervical spine.

Due to the complexity of the nervous system only the most basic anatomical and physiological relationships are shown.
